

MADE WITH  
**TABI**  
CELLS

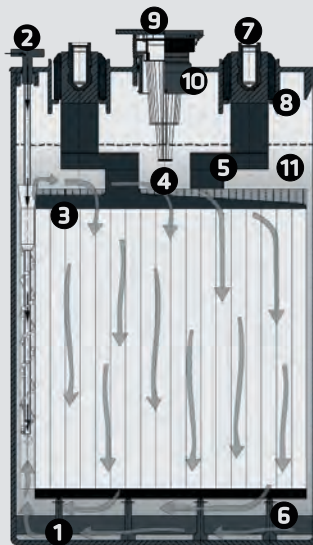

## TECHNOLOGY

A perfect combination of german air mixing technology and tubular intercells welded to north-american standards, each cell is equipped with a special tube that optimizes electrolyte circulation. The simple system that hooks to a connector equipped with auxiliary tubes, is ideal for all applications such as powering the most performant electric forklifts in the industry.

**RHINO MIXX:** More efficiency and durability, *without compromise.*

## DETAILED VIEW

- 1- Polypropylene casing
- 2- AIR MIXING system
- 3- Negative grid plate
- 4- Microporus separator
- 5- Positive armored tube plate
- 6- Settling rib
- 7- Terminal post
- 8- Rubber seal
- 9- Cell plug f35,5
- 10- Plug seal f35,5
- 11- Electrolyte

## AVANTAGES

- No equalization necessary
- Reduced water consumption
- Better battery life expectancy
- Shorter charging time
- Reduced energy consumption
- Better availability
- More energy available after an opportunity charge
- Bassi high end charger conversion for RHINO MIXX batteries available.
